

SINGAPAKULA VAMSHI

Senior React Native Developer | Mobile Application Engineer (Android & iOS)

Hyderabad, Telangana | +91 9505481298 | Vamshi.singapakula@gmail.com

PROFESSIONAL SUMMARY

Dynamic Senior React Native Developer with 4+ years of hands-on experience architecting, coding, and shipping high-performance, production-grade mobile applications for Android and iOS — from the first line of code through App Store / Play Store release. Currently own mobile engineering at UR.Life, a corporate health-and-wellness platform, driving app architecture, performance optimization, version upgrades, third-party/native integrations, and release management for consumer-facing fitness and health modules used company-wide. A true builder — independently designed, coded, and shipped a full internal admin application (Android & iOS) end-to-end, and authored and published an open-source npm package, react-native-barchart, to the public registry. Writes clean, scalable, well-tested TypeScript/JavaScript, translates Figma designs into pixel-perfect responsive UI, and is comfortable diving into native Android/iOS code when a feature demands it. Proficient with Redux, React-Query, Firebase (push notifications, analytics, crashlytics), CI/CD-driven release pipelines, and everyday use of AI-assisted development tools (ChatGPT, Claude, Gemini, Tabnine) to move faster without sacrificing code quality. Actively growing into full-stack engineering with Node.js, Express.js, and MySQL to design and consume REST APIs end-to-end. Known for ownership, fast learning, and calm, detail-oriented problem-solving under real production pressure.

CORE COMPETENCIES

▪ React Native (Android & iOS)	▪ TypeScript & JavaScript (ES6+)	▪ Redux & React-Query
▪ REST API Integration	▪ Native Module Bridging	▪ Performance Optimization
▪ Firebase (Push, Analytics, Crashlytics)	▪ CI/CD & Release Automation	▪ App Store / Play Store Deployment
▪ Node.js, Express.js, MySQL	▪ UI Animations (Reanimated, Lottie)	▪ Unit & E2E Testing (Jest)
▪ Figma-to-Code Implementation	▪ Code Review & Mentoring	▪ AI-Assisted Development
▪ App & Project Architecture	▪ Agile / Cross-Functional Collaboration	▪ Open-Source Package Development

PROFESSIONAL EXPERIENCE

Senior React Native Developer

Mar 2024 – Present

UR.Life Pvt. Ltd. | Hyderabad, India

UR.Life is a corporate health-and-wellness platform delivering fitness, nutrition, mental health, and preventive-care programs to employees through an integrated mobile and web experience.

App: UR.Life: Health & Wellness — [Google Play](#) | [App Store](#)

- **Owned end-to-end mobile delivery** for both Android and iOS apps — hands-on coding across project architecture, technical design, feature development, QA, App Store / Play Store deployment, and post-release support.
- **Architected the app's navigation, state management, and modular component structure** using React Native, TypeScript, Redux, and React-Query — restructuring the codebase for scalability and maintainability and managing React Native, dependency, and platform (Android/iOS) version upgrades with minimal downtime.
- **Profiled and optimized app performance** by refactoring render-heavy screens — implementing FlatList virtualization, memoization (React.memo, useMemo/useCallback), image caching, and reduced re-renders — delivering noticeably faster load times and smoother UX.
- **Wrote the fitness and health modules** (workout tracking, wellness content, health data flows) hands-on — building reusable custom hooks/components and polished UI animations (Reanimated, Lottie) core to UR.Life's corporate wellness product.
- **Designed and coded an internal Admin mobile app** for Android and iOS independently — UI, business logic, API integration, and deployment — enabling internal teams to manage employees, content, and operations. Owned the full lifecycle solo, from requirements to release.
- **Integrated 15+ third-party packages, SDKs, and native modules**, including Firebase (push notifications, analytics, crashlytics) and payment/health SDKs — writing custom native bridge code (Kotlin/Swift) where platform-specific functionality was required.
- **Built and rolled out a production push notification system** using Firebase Cloud Messaging, including deep-link handling, to drive user engagement and re-activation.

- **Owned CI/CD and release pipelines** — build signing, environment configs, versioning, and automated releases to the Google Play Store and Apple App Store.
- **Practiced disciplined engineering** — unit testing (Jest), structured QA cycles, crash monitoring/triage via Firebase Crashlytics, and peer code reviews to keep the codebase healthy and production-ready.
- **Converted Figma designs into pixel-perfect, responsive UI** in close collaboration with product, design, and QA in agile sprints.
- **Used AI-assisted tools daily** (ChatGPT, Claude, Gemini, Tabnine) to speed up prototyping, debugging, and code reviews without compromising code quality.
- **Expanding into full-stack development**, learning and applying Node.js, Express.js, and MySQL to design REST APIs and support backend integrations consumed by the mobile apps.

Jr. Mobile Developer

Aug 2022 – Feb 2024

Kanexy Pvt. Ltd. | Hyderabad, India

- Wrote, deployed, and maintained cross-platform mobile applications hands-on in React Native — building reusable components and custom hooks that delivered new features and UI improvements to strengthen performance and user experience.
- Debugged and resolved application issues across the codebase through systematic root-cause analysis, improving overall app stability.
- Implemented a push-notification system that measurably increased user engagement.

Project: Dhigna Events — event discovery & management app

- Built core screens and flows using React Native (props, state, event handling) and React Router for in-app navigation.
- Consumed RESTful APIs (GET/POST/PUT/DELETE) via Axios, with React-Query for efficient data fetching and caching; implemented push-notification alerts.
- Handled release engineering — unit testing, APK generation, keystore signing, and Play Store / App Store submission.

Project: Dhigna Badminton — real-time tournament & match-tracking app

- Developed a dynamic tournament application allowing users to join badminton tournaments and view live match results, enhancing the competitive player experience.
- Built front-end screens with React Native and CSS3/JavaScript; integrated RESTful APIs and React-Query for real-time data updates.

OPEN SOURCE

- **react-native-barchart** — self-authored, TypeScript-based, open-source npm package published to the public npm registry, providing a lightweight, highly customizable, animated bar-chart component for React Native apps.
- Designed the public API, wrote full documentation, and independently maintain the package — versioning, issue triage, and backward compatibility.

EDUCATION

Bachelor of Science in Computer Science

2019 – 2022

Palamuru University, Mahabub Nagar

TECHNICAL SKILLS

Mobile: React Native, Redux, React-Query, Recoil, Push Notifications (FCM), App Architecture, Play Store / App Store Deployment

Languages: JavaScript (ES6+), TypeScript

Backend (Growing): Node.js, Express.js, MySQL, REST API Development

Platforms & Tools: Android Studio, Xcode, Firebase, Microsoft Azure, Git/GitHub, VS Code, Axios

Web: HTML5, CSS3, DOM

AI & Design Tools: ChatGPT, Claude, Google Gemini, Tabnine (AI-assisted coding), Figma (UI/UX collaboration)

PERSONAL DETAILS

Date of Birth: 02-07-2002 | Languages Known: English, Telugu, Hindi

Address: Madhapur, Hyderabad, Telangana – 500081

I hereby declare that the details furnished above are true and correct to the best of my knowledge.

S. Vamshi
